VBA-Challenge

IRFAN GHAFFAR
Due Date: 09/18/2023 at 11:59PM Eastern

- For this assignment we had to go through all the stocks that was given in the sheet to find the openings and the closings at the end of the year.
- We had to develop a VBA code to loop through the stocks and organize the stock names and then do some calculations to give us a better picture.
- We had to find the Yearly Change of each particular stock, the percent change of the stock, the total Volume of that stock; and we had to do this for all the stocks.
- Then we had to develop a code to find which stock has a greatest percentent increase, decrease, and which stock has the greatest total volume.
- We also had to color code for the Yearly Change; Red for the change less than zero, and Green for the change greater than zero.

Help with the code:
- My tutor helped me with the code and fixed what was broken.
- The TA in class also helped me with running the code through all the sheets but when I was running it, it was giving me a bug so I didn't include the change in my code script.
